

Bioplex Mn is a combination of our leading biostimulant - Proplex - plus Amix Manganese. It is a combined biostimulant and crop nutrient, that can be used on all crops but is especially useful for cereal crops under stress conditions in early spring.

The biostimulant portion helps crops withstand, and recover from, stress while the nutrient portion provides Mn for early season vegetative growth.

The product will tank-mix with most pesticides and the Amix technology has been proven to improve fungicide activity through a plant strengthening effect.

Type:

Biostimulant

Features

- It has all the features and benefits of the AMIX formulation type.
- It has excellent compatibility in tank- mix.
- It will benefit other tank - mix partners improving performance; fungicides etc. through plant strengthening.

Product Specs:

Appearance:

Dark brown liquid

Typical analysis:

Nitrogen (N) : 6.6 g/L
 Sulphur (SO₃) : 155.4 g/L
 Ascophyllum nodosum : 16.5 g/L
 Manganese (Mn) : 100.8 g/L
 Magnesium (Mg) : 9 g/L
 Free Amino Acids (Mg) : 13 g/L

Crop Types & Application rates:

Bioplex Mn stimulates rapid growth early development as well as rapid and effective treatment of manganese deficiency.

It will help plants recover from stress, prevent severe damage due to frost or heat, aid plants under moisture stress, and stimulate defence mechanisms in treated plants.

Application Rates: 1.5 – 2.0 L/ha in 100 to 200 L/ha w

Mixing & Spraying:

It has excellent compatibility in tank-mix

It will benefit other tank-mix partners improving performance; fungicides etc. through plant strengthening

Compatibility:

Bioplex Mn is physically and chemically compatible with a wide range of agrochemical products.
