

**Breakthrough** is a dry flowable formulation of selected micronutrients with adjuvants to improve crop growth; especially following grazing by slugs, snails, birds, and rabbits.

**Breakthrough** can be used either as a Soil or a Foliar application.

At recommended rates of application **Breakthrough** may also Discourage and Deter the activity of Molluscs such as Slugs and Snails.

Treated foliage should also be unpalatable to grazing birds and animals

### Type:

Biostimulant – Other

### Product Specs:

#### Appearance:

Blue Powder

#### Typical analysis:

Potassium as K<sub>2</sub>O 111g

Sodium as Na 80g

Sulphur as SO<sub>3</sub> 330g

Boron as B 3g

Calcium as CaO 50g

Iron as Fe 100g

Magnesium as MgO

10g Manganese as Mn 50g

Zinc as Zn 52g

Copper as Cu 25g

**Crop Types & Application rates:**

**Standard Application:** 1Kg : 220L water per Hectare

**Maximum Application:** 4Kg : 440L water per Hectare

DO NOT EXCEED Maximum recommended rate

**Compatibility:**

**Breakthrough** is physically and chemically compatible with a wide range of agrochemical products. For more information please speak to your distributor, qualified agronomist, or the team at Micromix Plant Health [info@micromix.com](mailto:info@micromix.com)
