

BroadAcre Pulse & Rape Mix

BroadAcre Pulse & Rape Mix is designed specifically for application to Oilseed rape, Peas, Beans and Brassicas. This cocktail of elements includes those required for pod retention, health, yield and quality.

Most pod crops are capable of responding to a foliar supplement of Manganese molybdenum and Boron, high potential crops responding to the greatest degree, with this product offering quick and convenient mixing and extended agrochemical compatibility.

Type:

Micronutrients

Features

- Cost-effective
- Improves pod retention
- Improves health, yield and quality
- Proven low rate of application
- Rapid dissolving dust-free powder
- Easy to use
- Excellent compatibility
- Low pH, aiding penetration

Product Specs:

Appearance:

Light Tan Powder

Typical analysis:

Manganese (Mn) 80.0 g/Kg

Magnesium (Mg) 40.0 g/Kg (MgO) 64.0 g/Kg

Iron (Fe) 2.5 g/Kg

Zinc (Zn) 3.0 g/Kg

Boron (B) 40.0 g/Kg

Molybdenum (Mo) 5.0 g/Kg

Sulphur (S) 102.6 g/Kg Equivalent to (SO₃) 256.5 g/Kg

Crop Types & Application rates:

Crops: The full range of field crops, vegetables, fruit and ornamentals may be treated. Responses will be dependent on their susceptibility to any particular deficiency. All edible crops may be treated right up until harvest.

Rates of Application: Maintenance 1.25 kg/ha, Moderate Deficiency 2.5 kg/ha, Severe Deficiency 2.5 kg/ha repeated

Timings: As with all trace element sprays frequent repeated applications at relatively low rates are preferable to one large dose.

As nutrients are taken in by the foliage sufficient leaf area must be present to absorb the spray. This normally coincides with the 3-leaf stage onwards in most crops. Applications should be made in the early morning or late evening when the uptake by the plant will be maximised.

Mixing & Spraying:

Water Volumes: Do not apply in less than 200 litres of water per hectare unless the spraying equipment is specifically designed for low volume application (e.g. Airtec or low volume hydraulic nozzles).

DO NOT MIX with hormone weedkillers or mixtures containing hormone weedkillers unless specific recommendations are given.

Compatibility:

BroadAcre products are designed to be physically and chemically compatible with a wide range of agrochemical products. For more information please speak to your distributor, qualified agronomist, or the team at Micromix Plant Health info@micromix.com
