

Greenkeepers Solution C-Weed is a truly different natural algal extract fertiliser, that contains seaweed produced from a cool extraction process utilising only *Ascophyllum nodosum* from the Atlantic coast.

As it is harvested only during periods of rapid growth, this extraction method ensures that the natural biostimulant anti-stress and growth-enhancing compounds remain intact and are not denatured by heat.

GS C-Weed is rich in cytokinins and contains natural auxins, amino acids, and gibberellins along with alginic acid, mannitol, fucoidan and laminarin.

Features

- Increased early rooting - Reduces drought susceptibility
- Increase in photosynthetic area
- Increased leaf and shoot growth and in plant carbohydrate production
- Improved resistance to disease and pests
- Organic approved product.

Typical analysis: 50% *Ascophyllum nodosum* extract

Application Rates: GS C-Weed can be used all year round. It will improve both growth and quality.

Use 0.4 to 0.5 L/ha from seedling to young plant stage.

Turf Grass - use 0.75 to 1.0 L/ha as a programme of applications at 10-to-14-day intervals will generate the maximum benefit from GS C-Weed. Use a minimum of 150L/ha of water.

C-Weed - Summary

Product Application Rate	1-2 L/ha
Pack Size	10 Litre
Water Rate	150-200 L/ha

Compatibility: GS C-Weed is physically and chemically compatible with a wide range of agrochemical products. For more information please speak to your distributor, qualified agronomist, or the team at Micromix Plant Health info@micromix.com
