

Rondo Turbo

Rondo Turbo is a highly concentrated combination of liquid ammonium sulphate based water and plant conditioner with acid buffers, water softening agents, safeners, anti-foam and surfactants designed specifically to reduce the impact of hard water and aid in the uptake of agrochemicals and to prevent the adverse effects of free metallic cations and bi-carbonate ions or alkaline degradation of all foliar applications of agrochemicals and nutrients.

Features

- Rondo Turbo combines the benefits of ammonium sulphate with the acidifying and softening effects of Reactor.
- Can be used in hard water areas to maintain pesticide efficacy.
- May be used with a wide variety of pesticides to prevent spray water interfering with their activity

Product Specs:

Appearance:

Clear Liquid

Typical analysis:

Contains acid buffers, water softeners, surfactant and anti-foam, 200g/l Ammonium Sulphate

Application rates:

Use Rondo Turbo at a rate of 0.4% w/v of the total spray solution.

Tank Mixing & Compatibility:

Rondo Turbo is physically and chemically compatible for tank mixing with approved glyphosate formulations.

BIOLOGICAL COMPATIBILITY may be affected by variable combinations of factors such as; growth stage, crop condition, weather, and the composition of tank mixtures; beyond our reasonable control.

Recommendations therefore EXCLUDE the biological compatibility of tank mixtures and their biological effect on crop safety.
